

## STATEMENT OF ENVIRONMENTAL POLICY

Colorcon Limited employs over 200 staff and provides highly specialised products and services to the pharmaceutical and allied industries throughout Europe, The Middle East and Africa.

The company is located on a light commercial business park near the Dartford River Crossing in Kent, a short distance from a lake which provides a home to flora and fauna and is a recreational resource to local anglers and the people who work on the business park.

The company is fully aware of the role it plays in maintaining the environment and the responsibility that this represents. Preservation of the environment is one of our core values and this is demonstrated by ensuring our activities do not harm our environment.

Colorcon is committed to prevention of pollution and to reducing potential adverse impacts on our surrounding air, land, watercourses and neighbours and to continuous improvement of our environmental performance and practices, and to ensure the appropriate response plans are in place for potential emergencies. We will support this policy by implementing an Environmental Management System to ISO14001 standards.

We seek to achieve these conditions by managing our processes and outputs, with external expertise where necessary, to ensure that they are in controlled conditions. Where there is the possibility of failure of these systems, our environmental impact assessments prescribe measures to ensure response plans are in place and are effective.

The President of EMEA and senior management of the company are committed to complying with all current and future environmental legislation and employing best practice where possible.

Efficient use of natural and energy resources and the reduction and effective management of our waste streams are a high priority for the company.

We also aim to purchase from environmentally sound suppliers, to ensure the environmental message is maintained through our supply chain. We will review and monitor our purchasing policies to ensure that we encourage suppliers to employ sound environmental practices.

We will inform, train and motivate our employees to enhance understanding, awareness and sensitivity to environmental policies and to promote excellence in job performance on all environmental matters. We will also ensure our contractors are aware of their role in supporting this ethos.

We are committed to communicating our environmental aspects and impacts to any interested parties upon request.

This policy is available externally via [www.colorcon.com](http://www.colorcon.com) and internally via the portal and displayed throughout the site. It is also available on request from the EHS Department.
