**Colorcon Announced as Winner of
2017 CPhI Award: Excellence in Pharma: Excipients**

Hitting the Target on Tablet Film Coating Productivity

Colorcon proudly received the **Excellence in Pharma: Excipients** award for Opadry QX, Quick and Flexible Film Coating System at this year's CPhI Awards Ceremony.

Opadry® QX, a revolutionary immediate release film coating, cuts preparation time in half and coating times by at least 40%, delivering overall process efficiency and lower manufacturing costs. Applied over a broad range of process conditions in any type of equipment, from standard coating pans to state-of-the-art continuous processing units, Opadry QX always delivers a premium quality finish, even for tablets containing temperature-sensitive active ingredients.

The commercial impact of the process and equipment flexibility offered by Opadry QX means that pharmaceutical companies can easily transition the manufacture of drug products across sites, overcoming challenges often met with equipment differences. Capital investment may also be deferred through more efficient equipment utilization as productivity demand increases.
