

Opaque Color Concentrate for Confectionery Panning

Opacolor is a liquid color concentrate specifically developed for sugar panning. In the formulation of Opacolor, FD&C pigments are blended in a sugar syrup base, along with titanium dioxide for opacity. For sugarless panning, formulations can be developed using dextrose or sorbitol. In some cases, naturally derived pigments (non-certified colorants) can be used if required. Opacolor yields a confectionery product with exceptional color intensity and unequaled batch uniformity and reproducibility.

ADVANTAGES

- **Customized color matching** – Using state-of-the-art color matching equipment and highly skilled color technologists, Opacolor can be formulated to match your specific color requirements
- **Uniformity** – Every batch of Opacolor produced by Colorcon is evaluated using extensive quality control testing to ensure color reproducibility and consistency
- **Versatility** – Opacolor is the ideal product for sugar panning whether spraying or ladling in a conventional pan, or using an automated coating system
- **Efficiency** – Opacolor's pre-dispersed pigments provide better color distribution throughout the coating process
- **Simplicity** – Opacolor allows the operator to simply pour a given amount of product into the panning syrup and mix with minimal agitation, eliminating the need for precise weighing of multiple ingredients and elaborate mixing equipment
- **Cleanliness** – Opacolor dispersions keep production areas cleaner by eliminating airborne contamination from dust

USAGE

In a typical panning operation, the recommended usage is approximately 1 part of Opacolor in 16 parts panning syrup. The actual usage may vary depending upon the precise color and shade desired. A consistent color coat is usually achieved after 10-20 applications with colored solution.

Contact Colorcon's Food and Confectionery Technical Services department to discuss your specific application and Opacolor needs.
