

Nutracore® LFP

Lubricate Flow Press

Superior Lubricity for Capsule and Tablet Manufacturing

Colorcon®
Working Together for a Healthier World

Introducing Nutracore® LFP

Nutraceutical LFP, which stands for Lubricate, Flow, Press, is an organic lubricant designed to simplify nutraceutical capsule and tablet manufacturing. It blends directly into the formulation, reducing processing time by removing the need for sifting, pre-blending or rework.

With superior flow, smooth compression and easy ejection during tableting, Nutracore® LFP supports strong, consistent tablets that disintegrate more quickly when compared to the most popular clean label lubricant on the market today.

Manufacturing Made Easy

- **Efficient manufacturing:** enhanced lubricity promotes smooth capsule filling and tablet production.
- **Simplified processing:** adds directly to the blender without sifting or re-blending.
- **Superior powder flow:** helps prevent rat-holing, hopper scraping and automatic shutdown.
- **Strong tablets:** results in robust tablets with high tensile strength across compression forces.
- **Consistent filling:** supports reliable fill weight and content uniformity.
