

Opadry® TF

TiO2 Free Formulated Film Coatings

Opadry® TF, TiO2 Free Formulated Film Coatings

To address the concerns regarding the use of titanium dioxide (TiO2), Colorcon confirms that a range of alternative formulations using a range of colorants, including non-synthetic pigments and iron oxides are available as Opadry® TF, TiO2 Free Formulated Film Coatings.

Although there are no direct alternatives, with the same opacifying and pigment properties as TiO2, Colorcon can provide formulations with substitute materials suitable for most coating applications. Many pigments have moderate to good opacity on their own and applying a coating to a light color substrate coating formulation can result in excellent coverage without the use of any opacifier. In many cases these colors will be brighter and more vibrant than if combined with opacifiers.

Elimination of TiO2 provides manufacturers with an alternative coating finish that satisfies aesthetic appeal while addressing current market and consumer concerns.

Opadry TF coatings:

- Ensure a superior finish appealing to consumers
- Provide efficient and reproducible manufacturing performance
- Can be developed using a range of colorants
- Meet market needs for titanium dioxide-free film coating alternatives
