

No-Tox[®] Flexographic/Rotogravure Color Reference Guide

Colorcon No-Tox[®] Products Offers a Wide Range of Colors and Shades with FDA and/or EU Regulatory Compliance for Direct Contact with Food, Medical Devices or Pharmaceutical Products

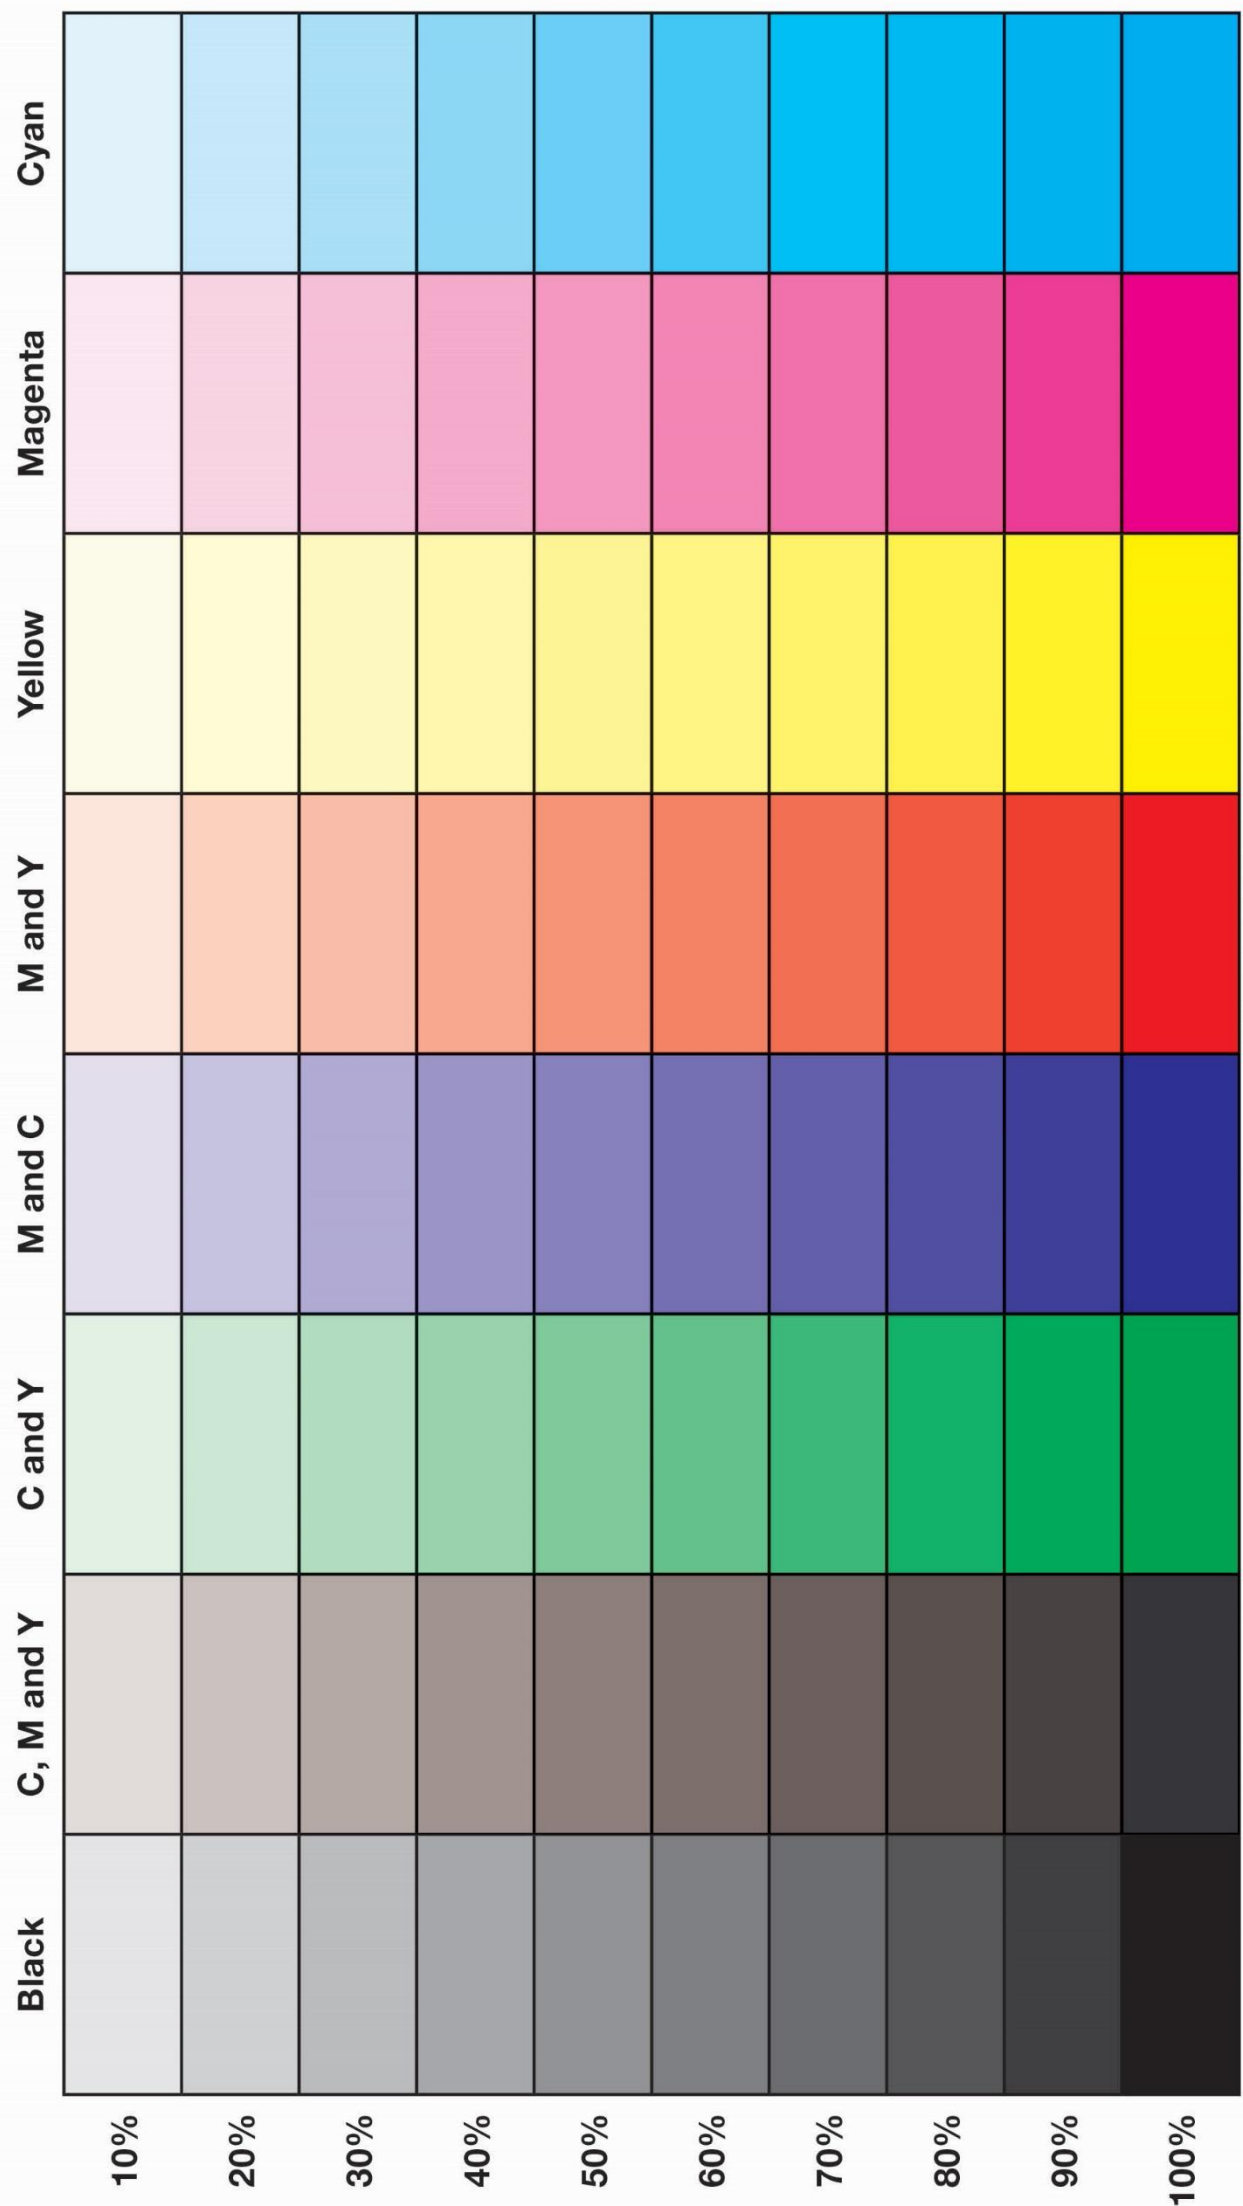

We can offer a wide range of ink colors and shades in both water and solvent systems, including approximations to most of the Pantone[®] color range.

Due to the limited number of pigments that meet FDA and/or EU compliance requirements for direct food contact, not all requested colors can always be matched perfectly. Additionally because of these compliance requirements, true metallic and fluorescent color shades are not available. For this reason, we strongly recommend that our customers review lab proofs of our matches on their substrate for color approval prior to committing to production runs.

Note: The colors appearing on this page may not be true reproductions of our many available No-Tox shades.

To get more information or if you are interested in matching a specific color, please contact us:
