

Colorcon No-Tox® Direct & Indirect Food Contact Printing Inks

Meeting the Needs of Your Metal Decorating Applications

Serving the world's non-toxic printing ink needs for almost 50 years, Colorcon's No-Tox® Products Division is a leading manufacturer of U.S. Food & Drug Administration (FDA) and EU compliant printing inks.

Colorcon's expertise in printing ink technology is based on a solid foundation built over five decades of manufacturing printing inks for the food, pharma and medical device industries.

Our highly specialized No-Tox inks are used for a variety of direct and indirect food contact packaging applications for metal deco including printing on the inside surface of beverage bottle crowns, food can lidding, mint containers and many other metal deco applications.

Our printing inks are manufactured exclusively from FDA compliant components in an FDA registered, dedicated current Good Manufacturing Practices (cGMP) facility.

All of our printing inks are manufactured exclusively from FDA compliant components in an ISO 9001:2015 certified, FDA registered, dedicated current Good Manufacturing Practices (cGMP) facility, using GMP practices.

We provide our customers with the safest line of regulatory compliant printing inks for printing applications that involve direct and indirect contact with food, pharma or medical products and back this up with a written guarantee.

Our products comply with all pertinent FDA and EU regulations as well as CONEG heavy metal restrictions.

We offer compliant inks for all printing processes and can customize these products to meet your particular needs. We also offer contract manufacturing and tolling capabilities in a cGMP facility.

In all of this we support our customers with unmatched technical support, our regulatory expertise as well as on-site printing press assistance.

Colorcon offers three distinct ink and coating product lines NO-TOX[®], FLEXICRAFT[®] and LITHOSAFE[®]

NO-TOX inks and coatings are appropriate for all commonly used printing methods where direct contact with food or medical and pharmaceutical products is anticipated.

FLEXICRAFT water-based flexographic and gravure inks and coatings and **LITHOSAFE** inks and overprint varnishes are ideal for minimal or indirect food contact applications or where a functional barrier is employed. They are also used in medical and pharmaceutical packaging applications where minimal or indirect product contact is intended.

No-Tox inks are specified by many of the world's leading food, medical device and pharmaceutical companies.

We create standard, process and custom colors, as well as aqueous coatings and varnishes.

Every product we create is designed with three paramount goals in mind: the ink must work on conventional printing equipment, be user friendly and must be safe for the intended end use. To this extent our scientists consider substrates, printing methods and migration potential in every ink they create.

Few of the raw materials used in conventional inks can be used in No-Tox inks. Colorcon is often working with an entirely different – and more expensive – set of raw materials that has undergone rigorous FDA testing.

The raw materials used in No-Tox inks are classified as indirect and direct food additives by the FDA. Since the products we create must meet the high standards of a variety of federal regulations, our raw materials are individually sampled and tested to ensure highest purity levels.

Because of our individual raw material testing, documented manufacturing processes and operating principles we are the only company that provides its customers with a written compliance guarantee for its inks. As a result No-Tox inks are specified by many of the world's leading food, medical device and pharmaceutical companies.
